(54) Title: LOCKING MECHANISM

(57) Abstract: A locking mechanism is provided for use
with at least one door and/or window (10) of a structure, the
mechanism comprising at least one operating handle (12)
and at least one electrical operating device (14). The operat-
ing device may comprise a fob (14) which may be manually
operated, e.g. by a householder, from outside a building, to
unlock a door or window. In a preferred embodiment, the
locking mechanism comprises a first rotatable member (23)
associated with the handle, a second rotatable member (24)
spaced from the first rotatable member (23) and associated
with a dead bolt (18) and a control member (28) extending
between the first and second rotatable members.
